Bringing compassion to the forefront of healthcare

How can we bring compassion to the forefront of healthcare?

Dr Robin Youngson
CoFounder of Hearts in Healthcare
Bringing compassion to the forefront of healthcare

Medical science: objective, materialistic, reductionist - we have become ‘body mechanics’, not healers
OLD STORY...

*Disease causes suffering...*

Suffering causes disease

... NEW STORY
Bringing compassion to the forefront of healthcare

Pessimists

Suffering causes disease:

Long-term survival after heart attack:

- pessimists have 4 times higher death rate from cardiac disease and 3 times higher mortality from all causes of death

Optimists
Suffering causes disease:

*Chances of getting clinical influenza after a dose of 'flu virus:*

- 3 times as many pessimists get influenza, as optimists
Bringing compassion to the forefront of healthcare

Burnout causes a 40% increased in heart attack and stroke – a bigger risk than smoking, high cholesterol or lack of exercise.

Burnout!
Suffering causes changes to gene expression:

Childhood abuse causes down-regulation of the gene for brain-derived neurotrophic factor (BDNF). The resulting structural abnormalities lead to Borderline Personality Disorder. Psychotherapy can reverse the changes in gene expression and heal the patient.
Bringing compassion to the forefront of healthcare

9 week mind-body program in patients with inflammatory bowel disease changed expression of 1059 genes

Happiness and gene expression... CTRA genes modulate the stress/threat response: pro-inflammatory, increased risk of arterial disease, cancer, neuro-degeneration and suppression of viral immunity

But there are TWO kinds of happiness:

1. **Eudaimonic** happiness - from the joy of serving others, compassion, caring.
2. **Hedonic** happiness - from serving your own material desires

**Hedonic** happiness up-regulates CTRA genes – risk of chronic disease!
Bringing compassion to the forefront of healthcare

80-90% of all chronic disease and cancer is caused by the patients’ emotional and physical habits – their lifestyle.
So how do we help our patients heal?

Through compassion - it’s our humane response to their suffering.
Bringing compassion to the forefront of healthcare

Our patients heal when they transcend suffering and find true happiness.
If you want others to be happy, practice compassion. If you want to be happy, practice compassion.

Ancient wisdom – the Golden Rule of Compassion

If you want others to be healthy, practice compassion. If you want to be healthy, practice compassion.
OLD STORY... (body mechanic)

Patient demand is overwhelming and uncontrollable...

Patients are an abundant source of resilience, healing and wellbeing

... NEW STORY (healer)
Doctors can ‘fix’ bones with screws and plates, connect bowel with sutures, and treat pneumonia with antibiotics. But the fusing of the bone, the joining of the bowel, and the disappearance of pus from a lung solid with pneumonia, are all miracles of healing.
Bringing compassion to the forefront of healthcare

Spontaneous remission/regression

“SR of neoplasms occurs when the malignant tumor mass partially or completely disappears without any treatment or as a result of a therapy considered inadequate to influence systemic neoplastic disease.”

(Kaiser et al, In Vivo 2000 Nov-Dec; 14(6): 773-788)

3,500 documented case reports in 800 medical journals, in 20 languages
Bringing compassion to the forefront of healthcare

But there is only one person you can change…

Health professionals can’t change their patients, only themselves - giving lifestyle advice to patients doesn’t work!

But health professionals who learn to find their own happiness and wellbeing, and practice with compassion, make an AMAZING difference to their patients – we have to be the change we want to see in our patients.
Bringing compassion to the forefront of healthcare

The science of healing connection
Bringing compassion to the forefront of healthcare

Cascading reactions in the healing response...

- Wellness genes up-regulated
- New protein synthesis
- Tissue healing
- Enhanced immunity
- Lowered blood pressure
- Positive emotions

- Cancer genes activated
- Stress hormones
- Inflammation
- Compromised immunity
- Raised blood pressure
- Negative emotions
Diabetic patients of high empathy primary care physicians had 42% fewer hospital admissions for metabolic crisis than patients of low-empathy physicians.
Bringing compassion to the forefront of healthcare

**Compassionate, whole-person care in terminal lung cancer – early access to palliative care**

- Fewer patients have depression, 16% vs 38%
- Fewer patients chose aggressive end of life care, 33% vs 54%
- Reduced overall cost of care
- But increased median survival, 11.6 months vs 8.9 months!
Randomised trial of compassionate care for homeless patients presenting to ER - 30% reduction in repeat visits in next month
Bringing compassion to the forefront of healthcare

Supportive pre-op visit by anesthesiologist:
- Halved the dose of post-op opiates

Non-supportive pre-op visit by anesthesiologist:
- Length of stay 2.7 days longer

Harvard study 1964: Randomised trial of supportive / non-supportive manner in pre-op visit by anesthesiologist
Bringing compassion to the forefront of healthcare

OLD STORY… (body mechanic)

Doctors set the agenda for investigation and treatment of disease…

Doctors bring their knowledge, skill and experience in service of the patient’s life

… NEW STORY (healer)
Dramatic reduction in healthcare utilisation as a result of finding common ground with patient, through compassionate, patient-centred primary care (Stewart 2000)

Patients who found common ground with their doctor also had better recovery from their discomfort and concern, and better mental health 2 months later
Bringing compassion to the forefront of healthcare

The percentage of interactions in family and general internal medicine that are patient-centred predicts the total cost of healthcare (Bertakis 2011)

Median annual cost of healthcare:

Below median patient-centred care (n=254)

Above median patient-centred care (n=255)

‘Body Mechanic’

‘Healer’
Drug therapy... ...or compassion?

$29,000,000,000
- Annual expenditure on statins (drugs to reduce cholesterol level)

But having a compassionate doctor reduces your 5-year risk of cardiovascular events more effectively than smoking cessation or prescribing a statin!
Compassionate caring is safer, more effective, satisfies patients, saves time, reduces demand, gives meaning to work, and costs less.
Interview exercise in pairs:

“Tell me a story of one day you had an extraordinary connection to a patient or client”

A interviews B for 5 minutes
B interviews A for 5 minutes

Then we’ll share stories in the whole room
Bringing compassion to the forefront of healthcare

OLD STORY...

I am a helpless victim of ‘the system’…

I am powerful to change the world through my attitude, beliefs and stories

… NEW STORY
Bringing compassion to the forefront of healthcare

How to be a happy health professional?

Choosing to love your work

Self-compassion

Practicing kindness, appreciation and gratitude

Building positivity and resilience

Mindfulness
How to be a happy health professional?

- The gift of time
- Spiritual growth
- Personal service
- Non-judgment
- Sharing your vulnerability
- Letting go of being the expert
Bringing compassion to the forefront of healthcare
Bringing compassion to the forefront of healthcare

Five daily practices that can transform your life...

1. Choose your thoughts on your journey to work
2. Small acts of kindness
3. Making the human connection
4. Find out first your patient’s concerns
5. Treat every patient like a family member
